Socrates Learning Platform: Best AI-Enhanced Child Tutoring Platform 2019

Created by Education Revolution, LLC, Socrates is a revolutionary learning platform that uses artificial intelligence to create personalized learning paths that adjust dynamically in real-time to students needs. Through this innovative technology, Socrates has helped tens of thousands of children and has demonstrated the use of its platform improves standardized test scores of Socrates users by 18-34%..

Socrates was awarded a grant from the National Science Foundation due to its unique innovation and benefit to society. In the short time since release, it has received numerous awards and recognitions.

Socrates was released just one year ago and already has been deployed to schools across the United States and in Mexico. Teachers and parents have embraced the solution due its ability to personalize each child's learning journey and its powerful command center, which allows educators to see where kids need help, assign homework, complete benchmarking tests, and more. Most importantly, it is improving

"Socrates was created to give every child an equal opportunity to learn and succeed", states Brian G. Rosenberg, Chief Executive Officer. "We greatly appreciate being recognized by CV Magazine for our efforts and we look forward to expanding our technology to help many more children in the future."

educational outcomes, with students using Socrates on a regular basis outperforming kids at the same school not using Socrates by 34%.

The dynamic learning engine adjusts across over thousands of topics of knowledge, making it a natural fit for all types of students, including those with special needs or gifted students. Deborah Amato, Special Education Teacher in Las Vegas, Nevada states, *"Socrates is precisely what my classroom needed as it ensures successful progression, and I can see exactly what they learned, retained, and where additional assistance is needed"*.

Kids love Socrates, which allows them to earn tickets and tokens as they learn, unlocking items for their avatars, collect cards, and play just-for-fun games. The growing list of games and rewards keeps the kids engaged, resulting in kids excited to complete their homework and completing additional learning at home.

Currently the platform teaches math, science, and language arts for elementary and middle school students. New topics are being released on a regular basis. The software is available in English and Spanish, with more languages on the way. High school and adult learning topics are planned for later this year.

In addition to this, the Socrates platform can be used to teach customized content for any unique educational needs. Socrates has already completed several *"platform"* partnerships where the engine is licensed for custom learning purposes.
